## For Immediate Release

## **Oculys Recognized As A Canadian Top 25 Up & Coming Technology Company By Branham300**

*Oculys solutions deliver real-time value to hospitals*

**(Kitchener, ON) – May 20, 2015**

Oculys Health Informatics Inc. ([www.oculys.com](http://www.oculys.com)), best known for real-time Emergency department wait time clocks and patient flow solutions, was selected by the Branham Group as one of Canada's Top 25 Up & Coming ICT companies in the 2015 Edition of the Branham300.

The Branham300 listing defines Canada's top tier information and communication technology (ICT) companies. Top 25 Canadian Up and Coming ICT Companies are selected based on creativity and innovation whether in a new technology area or optimizing existing technology in an innovative manner.

"Innovation and collaboration are the cornerstones of our approach and success," said Franck Hivert, Oculys' CEO and President. "We received this honour in 2013 and are very excited to be back on the list. Our continued growth is a testament of our commitment to helping hospitals improve performance and support patients. We have amazing clients and a great team."

Oculys received the prestigious Ingenious Award in late 2014 and was selected by the Ontario Centres of Excellence in February 2015 to receive funding from Ontario's Ministry of Government and Consumer Services in the AdvancingHealth Program. At the heart of these awards and recent recognition granted to Oculys, is innovation.

"Hospitals are increasingly recognizing the value of the Oculys solutions and the power of increased visibility", added Franck Hivert. "By providing a very unique and simple tool, we are making a difference for hospital leaders and patients."

### **About Oculys:**

Oculys is a Waterloo Region based software company. Oculys specializes in developing real-time, mobile applications for hospitals and healthcare. Its main purpose is to enhance, develop and market innovative technology solutions that empower health-care organizations to be more efficient, effective and patient focused with the express input and feedback of healthcare professionals.
